

Sales & E-Commerce Analytics

Phase 7 — Business Insights & Recommendations

Tools: Excel • SQL • Power BI • DAX

Purpose: Business insights and recommendations from the completed Sales & E-Commerce Analytics project.

1. Overall Business Performance

KPI	Result
Total Sales	355.65M
Total Profit	66.54M
Total Quantity	48K
Number of Orders	12K
Profit Margin	≈ 23%
Average Order Value	≈ 29K

The dashboard indicates approximately 355.65M in total sales and 66.54M in total profit across approximately 12K orders. The overall profit margin is around 23%, while average order value is approximately 29K.

2. Sales by Category

Insight: The Sales by Category visual identifies the category with the strongest sales contribution. The highest-performing category should be treated as a key demand area for inventory and marketing decisions.

Recommendation: Maintain adequate inventory for high-demand categories and promote strong-performing products.

3. Profit by Category

Insight: The Profit by Category visual identifies the category contributing most strongly to profitability. Sales volume and profit should be evaluated together.

Recommendation: Prioritize profitable products and monitor pricing, costs, and discount levels.

4. Sales by Region

Insight: The Sales by Region visual compares regional performance and identifies where demand is concentrated.

Recommendation: Study successful regions and apply suitable strategies to weaker regions through targeted promotions and distribution improvements.

5. Sales by Payment Mode

Insight: The Sales by Payment Mode visual shows customer preference across available payment methods.

Recommendation: Keep popular payment methods reliable, convenient, and secure.

6. Top 10 Products

Insight: The Top 10 Products visual identifies important revenue-generating products.

Recommendation: Protect stock availability for top sellers and consider bundles, cross-selling, and upselling.

7. Monthly Sales Trend

Insight: The Monthly Sales Trend helps identify high- and low-demand periods and possible seasonal patterns.

Recommendation: Use monthly trends for inventory, staffing, promotions, and campaign planning.

8. Profitability Analysis

Insight: The dashboard shows an overall profit margin of approximately 23%, indicating positive profitability.

Recommendation: Improve margins through cost control, pricing optimization, high-margin product focus, and careful discount management.

9. Average Order Value

Insight: Average order value is approximately 29K and helps evaluate the typical sales value generated per order.

Recommendation: Increase order value through bundles, cross-selling, upselling, and relevant product recommendations.

10. Key Business Insights

Insight 1: Approximately 355.65M in sales and 66.54M in profit were generated.

Insight 2: The overall profit margin is approximately 23%.

Insight 3: Average order value is approximately 29K.

Insight 4: Category analysis identifies important sales and profit opportunities.

Insight 5: Regional analysis highlights differences in market performance.

Insight 6: Payment-mode analysis reveals customer purchasing preferences.

Insight 7: Top-product analysis identifies key revenue-generating products.

Insight 8: Monthly analysis helps identify periods of high and low demand.

11. Business Recommendations

1. Focus marketing and inventory resources on high-performing categories and products.
2. Use regional performance to target promotions and improve distribution.
3. Maintain sufficient inventory for top-selling products.
4. Increase average order value through bundles, cross-selling, and upselling.
5. Monitor discounts, pricing, and costs to protect profitability.
6. Use monthly sales patterns for inventory and campaign planning.
7. Support the most-used payment methods with a reliable checkout experience.
8. Review sales and profit KPIs regularly through the Power BI dashboard.

12. Conclusion

The Sales & E-Commerce Analytics project provides a structured view of business performance using Excel, SQL, Power BI, and DAX. The analysis covers sales, profit, orders, quantity, categories, regions, payment behavior, products, monthly trends, and profitability. These insights can support better inventory planning, marketing decisions, pricing strategies, regional planning, and profitability improvement.

Important: Before final submission, replace generic category/region/payment/product/month statements with the exact rankings from your completed Power BI dashboard.
